EVAPORATIVE AIR COOLING.

Evaporative air cooling is the most efficient and environment-friendly cooling technology which works on the principle of heat absorption by water evaporation.

- A pump circulates water from the tank on to a cooling pad making it wet.
- A fan/blower draws hot air from outside the unit and forces it through the moistened pad.
- As the air passes through the wet pad it gets cooled by evaporation.
- The blower and motor are designed to deliver the appropriate airflow.
